

MEMOREX®

Thin Light Canister

Memorex, the full line supplier, markets a thin light canister (TLC) specially designed for protecting valuable computer tape data and increasing tape storage efficiency.

Made of tough, lightweight plastic, the Memorex TLC fully encloses computer tape reels to protect against moisture and contamination from debris. The TLC won't crack or shatter when dropped, unlike most computer tape canisters.

TLC's space-saving design allows users to store 33% more reels in the same amount of space that would be used by conventional canisters. The TLC weighs half as much as a conventional canister, reducing freight costs and cost per megabyte of stored data.

Originally designed by Memorex for the geoseismic industry, the TLC is available to all users who want to save on archival space and expenses.

Memorex Thin Light Canister

- Protects computer tape from moisture and debris.
- Won't crack or shatter.
- 50% lighter than conventional canisters.
- Allows user to store 33% more reels in the same archival space when compared to conventional canisters.
