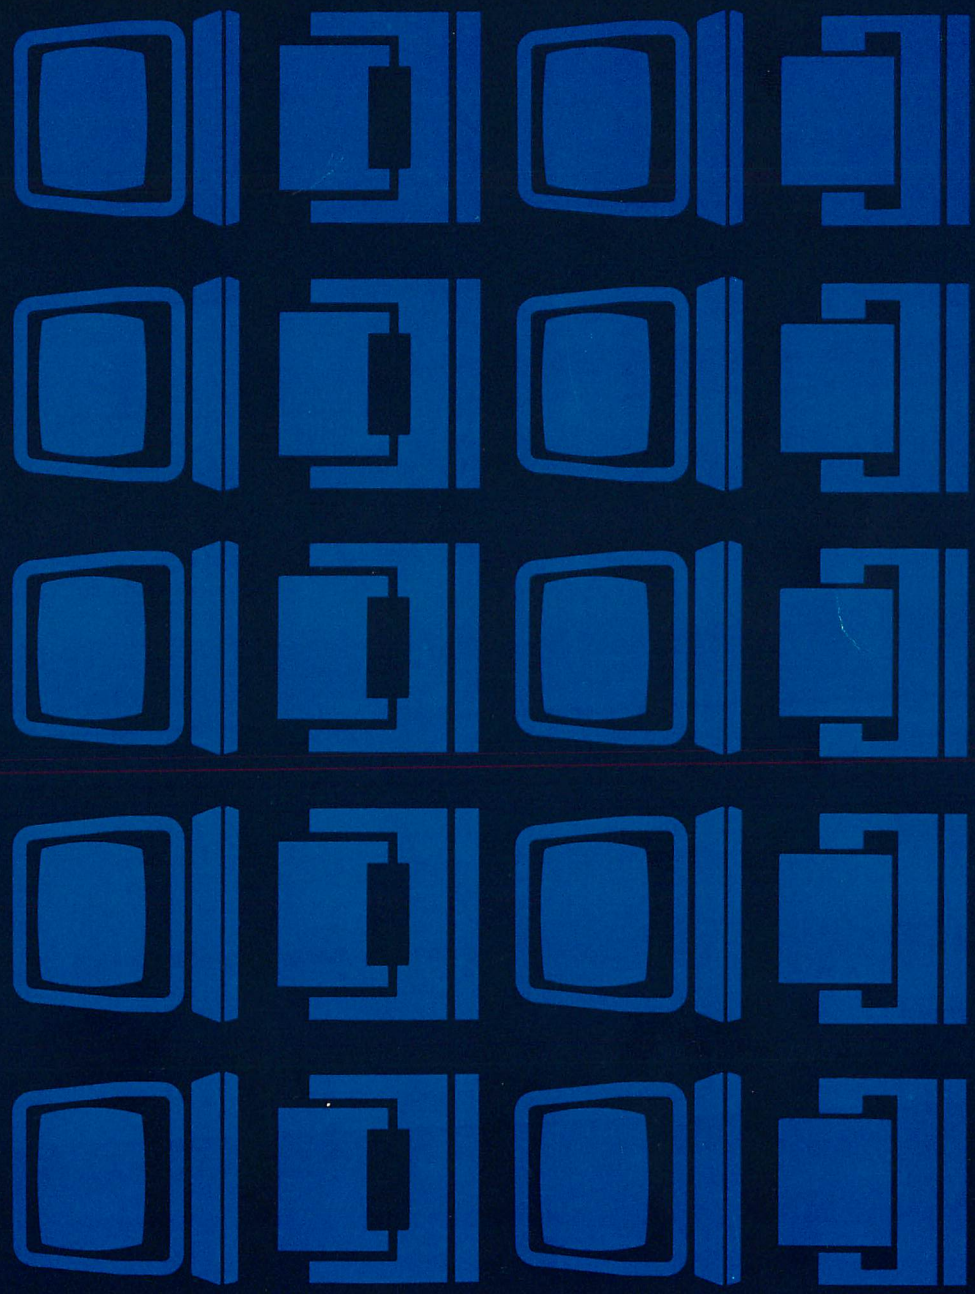
Systems/34/36/38 Plug-Compatible Peripherals



Versatile Plug-Compatibles for Your Systems 34/36/38 Environment

Whatever you need in a plug-compatible display for your Systems/34/36/38 environment, Memorex has it... either versatile and full sized or compact and full featured. And you can choose the features that are best for you. Like different keyboard styles. Green or amber screens. Monitors that can tilt, swivel or even sit on a shelf. All Memorex displays are energy efficient for lower utility bills and longer component life. And they all give you the features that help your operators work most efficiently:

- Recessed, non-glare screens
- Nonreflective keytops and mouldings
- Ergonomically designed keyboards
- Audible alarms
- Automatic dimming
- Keyboard numeric locks
- Mark unprotected field indicators
- Selectable cursor styles
- Operator information and systems status lines
- Screen printer ports for local hard copy from the Memorex 2173.

2051 Display Station

This sturdy, comfortable, full-sized display gives you a non-glare, 15-inch monitor with characters so crisp you can even read them when the monitor's off its base and sitting on a shelf.

It's a plug-compatible alternative to IBM's 5251 Display Station, Model 11, with a long list of standard features including:

- Choice of sturdy low-profile or comfortable ergonomic keyboard
- Cable-thru to let you daisy-chain additional printers or displays through the 2051
- Convenient reference template on low-profile keyboard.

2191 Display Station

Compact, modular and cost effective, the 2191 gives you a space saving, 12-inch, green or amber screen. Total weight of all three components is just 25 pounds and the cabling from keyboard to logic module and logic module to display lets you arrange them any way that's convenient. The security keylock protects your data and there's even a feature that lets you make your screen display look like an IBM 5291-2 or 5251.

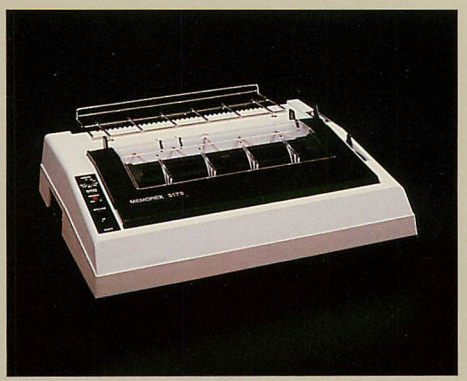
Memorex printers are built to work in the real world, where space is at a premium and conditions are less than ideal. Quiet, durable and compact, they have the versatility to handle any application.

2024 Multifunction Printer

This workhorse handles heavy loads and a wide range of applications. You can print in both high-speed dot matrix (350 cps) and dynamic letter quality (80 cps). With no bin in back and a choice of five paper paths, the 2024 fits into tight corners where

many printers won't. It operates quietly with a patented, long-life (over 500 million characters), stored-force flexhammer printhead that actually runs cooler at high speed. Features include:

- Automatic sheet feeder option
- Selectable fonts
- Wide choice of line spacing.



2173 Screen Printer

Lightweight, compact and economical, the 2173 Screen Printer gives you a quick hard copy of the information on your screen. It attaches directly to your display station without tying up a port on the controller or host. The bi-directional, logic-seeking printhead prints at 120 cps without host intervention. The 2173 handles fanfold, roll or cut-sheet paper and forms up to four parts thick.

The Memorex Commitment

Memorex gives you more than full-featured displays and printers. We give you our commitment to providing the most complete family of Systems/34/36/38 plug-compatibles you can find... plus our commitment that our family of products will continue to grow right along with your needs.

And we give you our commitment to quality and service, built over a quarter century of meeting the needs of businesses like yours.

We can arrange flexible financing terms to suit your needs. And we'll back you with a network of sales and service offices that spans the world.

It's all just part of our commitment to you.
